To Whom it may concern,

The Sushi and Panda foundation is a registered NPO that aims to improve the lives of South Africa's township animal's and their communities.

We are currently working hard on doing a full and permanent clean-up of Touws River Township. We have sponsored and held 2-3 mass sterilization campaigns in the township per year for 3 years now where hundreds of animals are spayed/neutered, vaccinated, treated for ticks, fleas and worms. The animals are also all sent home with blankets, food and their chains around their necks are replaced with collars. We are finally down to just doing maintenance spay days to keep the breeding and population under control. To date we have spayed/neutered, vaccinated and treated 1229 animals in our townships which will prevent approximately 9832 unwanted animals being born every year.

To give the animals in Touws River a more permanent solution to their health problems, we have opened up our FREE Sushi and Panda Clinic in the heart of the town which the people can access by foot with their animals and will provide the animals with access to basic vet care all year round. The animals are in desperate need of this as the nearest vet is 1 hours' drive away and most of the people do not have access to transport, therefor the animals end up suffering if they become sick or injured. The clinic is a massive step up for our Touws River program as the animals will be constantly treated for diseases and injuries as well as being spayed/neutered regularly. We believe this will permanently keep the Touws River animals and population in the condition we have been wanting. We hope to then implement this business model that we have created into other townships that are in need.

To uplift the community of Touws River we have employed a local team of 5 staff members who help us. These 5 employees work at our free clinic assisting the vet as well as go door to door every day in the township to record which animals are sterilized and which still need to be done and to do general check-ups on the conditions of the animals and help people learn to care for their animals properly. We also supply our team with dog food and they ensure the street dogs are fed every day. They also build dog houses to give the animals in Touws River shelter. By doing this we are uplifting, employing and educating the local people on top of improving the lives of the animals drastically.

We have successfully rehabilitated and re homed 27 animals that were victims of abuse or neglect. To carry on with this program and to give animals a second chance at life we have opened The Sushi and Panda Haven, where we take in severely abused or abandoned dogs from the townships, rehabilitate them and then find them a loving forever home.

We always need support so we can continue our work, to make sure the communities we are involved in keep improving and so we can expand into other areas that need our help.

Kind regards

Megan Taylor

Founder and Owner.
